

# Scotch® 35<sup>™</sup>

Vinyl Electrical Tape

## 1. **Product Description**

Scotch® Vinyl Electrical Tape 35 is a 0,18 mm polyvinyl chloride (PVC) color-coding tape. Outstanding electrical and mechanical properties make this tape most suitable for use in phase identification, color coding of motor leads and piping systems, and for marking safety areas. Scotch® Tape 35 operates over a wide range of temperatures up to 105°C. This tape is available in nine fade resistant colors. The tape is conformable for cold weather applications down to -10°C.

## 2. Applications

- Color coding for phase identification, job identification and safety
- Insulating electrical wiring
- Protecting electrical conductors, motor leads and piping from moisture, alkalis, acids, corrosion, abrasion and weather

## 3. Typical Properties

Properties measured at room temperature 23°C unless otherwise stated.

Physical Properties	Typical Value
Colors	Blue, Brown, Grey, Green, Orange, Red, Violet, White, Yellow
Adhesive	Pressure-sensitive rubber
Thickness	0,18 mm
Continuous Operating Temperature (max)	105℃
Breaking Strength	30 N/10 mm
Elongation (% at break)	225%
Adhesion to Steel	2,2 N/10 mm
Adhesion to Backing	2,2 N/10 mm
Flagging	2,5 mm

Supersedes

Electrical Property	Typical Value
Voltage Rating (UL 510)	600 Volts
Dielectric Breakdown	
Standard Condition	8,750 V*
Wet Condition (96 Hrs @ 23℃)	7875 Volts
	*Note: Dielectric strength 49,2 kV/mm
Insulation Resistance	
(High Humidity Method)	>1x10 <sup>6</sup> megohms

## 4. User Information

#### 4.1 Specifications

Scotch® Tape 35 is based on polyvinyl chloride (PVC) and/or its copolymers and has a rubberbased, pressure-sensitive adhesive. The tape shall be 0,18 mm thick, and be UL Listed and marked per UL Standard 510 as "Flame-Retardant." The tape shall be compatible with synthetic cable insulations, jackets and splicing compounds. The tape will remain stable and will not telescope more than 2,54 mm when maintained at temperatures below 50℃.

#### 4.2 Installation

- Apply in half-lapped layers with sufficient tension to conform and produce a uniform covering. In most applications, this tension will reduce the tape width to approximately 60% of its original width.
- On a pigtail splice, wrap the tape beyond the end of the wire and then fold back and over-wrap, leaving a protective cushion to resist cut-through.
- Wrap uphill, taping from a smaller diameter to a larger diameter surface. Apply the tape with no tension on the last wrap to prevent flagging.

### 4.3 Agency Approvals & Self Certifications

- UL Listed UL 510 Standard "Insulating Tape" (product category OANZ), File E129200; meets UL 510 labeling for "flame-retardant" for vinyl electrical tape.
- CSA Certification; Standard C22.2 No.197-M1983 "PVC Insulating Tape," File LR 48769
- For RoHS information, please visit www.3M.com/RoHS

#### 4.4 Shelf Life & Storage

Scotch® Vinyl Electrical Tape 35 has a 5-year shelf life from date of manufacture when stored in a humidity controlled storage (10°C to 27°C and <75 % relative humidity).

#### 4.5 Availability

Please contact your local distributor.
