

## Spool with straps

### Patented model

- They solve the problem of tangled wires.
- The spool can be opened and a coil can be placed in very quickly: there is no need to unwind and rewind the wire.
- The 2 flanges of the spool are connected by 3 elastic straps, each of which have 3 anchoring points. This helps in perfectly holding the coil in place. The spool is thus well balanced.
- Generally suitable up to 100m of 6<sup>2</sup>.
- QUAD range for work sites and BOBI range for the workshop.
- The spool is also sold separately (E3300390) and is also available in 400mm diameter (E3300490 for cables) and 600mm diameter (E3300690 for pipes).

The wire coil is put in place

The straps are adjusted

The spool is ready to be unwound
