Serie Compression Fittings

9000
10000
13000

Le 3 gamme di raccordi a compressione in ottone Aignep si differenziano principalmente per le normative di riferimento, le applicazioni e le caratteristiche tecniche delle ogive.

Con queste tre tipologie Aignep rappresenta la scelta più ampia del mercato e riesce a risolvere problemi applicativi ben noti. Le possibilità di utilizzo e di connessione sono molteplici, si possono connettere in assoluta sicurezza tubi rigidi metallici (ottone, rame, alluminio) e tubi in materiali termo plastici come poliuretano, poliammide e teflon. Disponibili Ogive in teflon.

Serie 9.000	DIN 3861
Serie 10.000	DIN 3862 (Bicono)
Serie 13.000	UNI EN 1254 2:2000 (universale)

Principali vantaggi

- 3 tecnologie di connessione
- Compatibilità numerosi fluidi industriali
- Tenuta garantita su differenti tipologie di tubi
- Senza elementi di tenuta (elastomeri)
- Dal ø 4 al ø 22 mm
- Robustezza meccanica
- Versioni con nichelatura
- Silicon Free

Applicazioni

- Automazione Pneumatica pesante
- Automotive
- Raffreddamento industriale
- Gas inerti, vapore, lubrificazione
- Vuoto

Aignep propose 3 gammes de raccords à compression en laiton selon différentes normes.

Cette large sélection permet de répondre à tous les besoins dans de nombreuses applications industrielles.

Spécialement conçus pour le raccordement avec des tubes métalliques rigides (Laiton, cuivre, aluminium) ils garantissent une parfaite sécurité dans la connexion en basse et moyenne pression.

Raccordement avec du tube PU, PA et PTFE possibles en utilisant une fourrure intérieure.

Série 9000	selon DIN 3861
Série 10000	selon DIN 3862 (Bi cone)
Série 13000	selon UNI EN 1254 2: 2000 (Universelle)

Principaux avantages

- 3 Technologies de raccordement
- Compatibilité avec tous les fluides industriels
- Connexion sécurisée avec différents tubes
- Étanchéité métal/métal
- De ø 4 à 22 mm
- Excellente résistance mécanique
- Versions nickelées ou brute
- Sans silicone

Applications

- Automatismes pneumatiques – milieux sévères
- Process Automobile
- Refroidissement industriel
- Gaz neutre, vapeur
- Vide

Aignep offers 3 lines of compression fittings in brass according to different manufacturing directives. This wide selection helps to satisfy the most demanding needs of the market.

Especially designed for connection with metallic tubes (brass, copper, aluminium) to secure connection in low-medium pressure. Connection with PU, PA and PTFE tubes with a smart internal bush.

9.000 Serie	DIN 3861
10.000 Serie	DIN 3862 (Dual cone)
13.000 Serie	UNI EN 1254 2:2000 (Universal)

Main advantages

- 3 Connection Technologies
- All industrial fluids compatibility
- Secured connection with different tubes
- Metallic sealing
- From ø 4 to 22 mm
- Mechanical Resistance
- Nickel-plated version
- Silicon Free

Applications

- Heavy Pneumatic Automation
- Automotive
- Industrial cooling
- Inert Gases, Steam
- Vacuum

Aignep bietet drei Serien von Klemmringverschraubungen aus Messing an, welche sich vor allem durch verschiedene Herstellungsrichtlinien unterscheiden. Dank dieser großen Auswahl können auch die anspruchsvollsten Nachfragen erfüllt werden.

Speziell entwickelt für die sichere Verbindung von Metall-Rohren (Messing, Kupfer, Aluminium) bei geringem bis mittlerem Druck. Verbindung mit PU, PA und PTFE-Schläuchen mit einer Stützhülse.

9.000er Serie	DIN 3861
10.000er Serie	DIN 3862 (Doppelkegel)
13.000er Serie	UNI EN 1254 2:2000 (Universal)

Hauptvorteile

- 3 Verbindungs-Technologien
- Kompatibel mit allen Medien
- Sichere Verbindung mit allen Rohren
- Metall-Dichtungen
- Von ø 4 bis 22 mm
- Mechanische Festigkeit
- Vernickelte Version
- Silikonfrei

Anwendungen

- Schwere pneumatische Automation
- Automotive
- Industrie-Kühlung
- Inertgase, Dampf

Las 3 gamas de racores a compresión en latón Aignep se diferencian principalmente por las normativas de referencia, las aplicaciones y las características técnicas de los anillos.

Con estas tres tipologías Aignep representa la elección mas amplia del mercado y resuelve problemas aplicativos de forma notable. Las posibilidades de utilización y de conexión son múltiples, pueden conectarse con absoluta seguridad tubos rígidos metálico (latón, cobre, aluminio) y tubos en material plástico como poliuretano, poliamida y teflón. Disponibles anillos en teflón.

Serie 9.000	DIN 3861
Serie 10.000	DIN 3862 (bicono)
Serie 13.000	UNI EN 1254 2:2000 (Universal)

Principales ventajas

- 3 tecnologías de conexión
- Compatibilidad con numerosos fluidos industriales
- Estanqueidad garantizada con diferentes tipologías de tubo
- Sin elementos de estanqueidad (Elastomeros)
- Del diam. 4 al diam 22 mm
- Robustez mecánica
- Versión con niquelatura
- Libres de silicona

Aplicaciones

- Automatización neumática pesada
- Automoción
- Refrigeración industrial
- Gases inertes, vapor, lubricación
- Vacío

A Aignep oferece 3 linhas de conexões de compressão em latão de acordo com diferentes diretivas de fabricação.

Esta ampla gama de itens auxilia a atender as mais complexas necessidades do mercado.

Especialmente desenvolvido para conectar tubos metálicos (latão, cobre, alumínio) e assegurar conexões em pressões médias e baixas.

Conexão com tubos em PU, PA e PTFE através de uma bucha interna.

9.000 Série	DIN 3861
10.000 Série	DIN 3862 (Dual cone)
13.000 Série	UNI EN 1254 2:2000 (Universal)

Principais vantagens

- 3 Tecnologia de Conexão
- Compatibilidade com todos os fluidos industriais
- Conexão segura com diferentes tubos
- Vedação Metálica
- Para tubos de ø 4 a 22 mm
- Resistência Mecânica
- Versão Niquelada
- Livre de Silicone

Aplicações

- Automação Pneumática Pesada
- Automotiva
- Refrigeração Industrial
- Gases Inertes, Vapor
- Vácuo

Montaggio

IT

Per garantire le migliori prestazioni dei nostri raccordi, riportiamo una sequenza di operazioni da eseguire durante il montaggio, che contribuiranno ad eliminare sprechi di tempo e cattive applicazioni del prodotto.

Assembling

GB

To ensure the best function of our fittings, please follow the under mentioned instructions, in order to avoid waste of time and bad applications of the product.

Montageanleitung

DE

Um eine optimale Leistung unserer Armaturen zu gewährleisten haben wir in den folgenden Schritten die Montage der Verbindung dokumentiert. Damit sollte keine falsche Montage durchgeführt und keine verschwendete Zeit benötigt werden.

Assemblage

FR

Pour assurer le bon fonctionnement des raccords, veuillez suivre les instructions de montage ci-dessous afin d'éviter le gaspillage de temps et une mauvaise utilisation des produits.

Montaje

ES

Para garantizar las mejores prestaciones de nuestros racores, indicamos una secuencia de operaciones para seguir durante el montaje, que contribuirán a eliminar pérdidas de tiempo, e incorrectas aplicaciones del producto.

Montagem

PT

Para garantir o melhor funcionamento das nossas conexões, mostramos a seguir uma sequência de operações a serem executadas durante a montagem, de forma a evitar desperdícios de tempo e má aplicação do produto.

1

Tagliare il tubo a 90° togliendo le bave interne ed esterne.

Cut the tube at 90° and remove internal and external burrs.

Schneiden Sie das Rohr 90° und entgraten Innen- und Aussen- kanten.

Couper le tube à 90° et l'ébavurer.

Cortar el tubo a 90° eliminando rebabas internas y externas.

Cortar o tubo a 90° e remover a as rebarbas internas e externas.

2

Oliare le filettature del dado e del corpo del raccordo, compresa l'ogiva. Quindi infilare sul tubo dado e ogiva, facendo attenzione che quest'ultima abbia la parte tagliente verso il raccordo.

Lightly oil the tube nut, olive and fitting thread. Slide the nut and olive onto the tube ensuring that the sharp side of the olive is facing the fitting.

Oelen Sie das Gewinde der Überwurfmutter und des Körpers, einschliesslich der Nute für den Klemmring. Schieben Sie die Überwurfmutter und den Klemmring, mit der scharfen Kante des Klemmrings gegen den Körper, über das Rohr.

Huiler le filet de l'écrou et celui du corps du raccord. Insérer l'écrou et la bague (côté affuté contre le corps du raccord) sur le tube.

Poner aceite en la rosca de la tuerca y del cuerpo del racor incluyendo el bicono. Seguidamente enfilar en el tubo la tuerca y el bicono, asegurando que este último tenga la parte cortante hacia el racor.

Lubrificar levemente a rosca da porca. o corpo da conexão e a bucha. Deslizar a porca e a bucha pelo tubo, garantindo que o lado mais afiado da bucha esteja voltado para a conexão.

3

Avvitare manualmente il dado fino ad ottenere una certa resistenza dell'ogiva.

Screw the nut onto the fitting by hand until hand-tight.

Schrauben Sie die Überwurfmutter von Hand soweit an, bis Sie einen Widerstand bemerken.

Visser manuellement l'écrou jusqu'à obtenir une certaine résistance.

Apretar manualmente la tuerca hasta obtener cierta resistencia del bicono.

Apertar manualmente a porca sentir resistência da bucha.

4

Verificare la completa adesione del tubo al corpo, forzando il medesimo verso l'interno del raccordo e quindi, con la chiave, bloccare il tubo.

Ensure the tube is pushed fully home into the fitting before tightening the nut with the correct spanner.

Bevor Sie die Überwurfmutter mit dem Schlüssel anziehen stellen Sie sicher, dass das Rohr ganz an den Anschlag in die Verschraubung geschoben ist.

Avant de serrer l'écrou avec la clé, vérifiez que le tube est en butée dans le corps du raccord.

Verificar la completa adhesión del tubo al cuerpo, forzándolo hacia el interno del racor y seguidamente con la llave, bloquear el tubo.

Garantir que o tubo esteja bem encaixado dentro da conexão antes de apertar a porca com a chave adequada. Se necessário, antes de apertar, empurre o tubo um pouco mais.

5

Stringere il dado (1 giro e 1/4 o 1/2) ponendo, se necessario, dei punti di riferimento.

Tighten the nut with the spanner one and a quarter turns, marking reference points, if necessary.

Ziehen Sie die Mutter mit dem Schlüssel 1 1/4 Umgang an, wenn nötig machen Sie Bezugspunkte.

Visser l'écrou en le tournant avec une clé sur 1 tour 1/4. Si nécessaire, faire un repère de serrage.

Apretar la tuerca (1 giro y 1/4 o 1/2) indicando si es necesario un punto de referencia.

Aperte a porca (1 giro e 1/4 ou 1/2). Se necessário use marcar de referência.

6

A garanzia che l'ogiva abbia inciso il tubo svitare il dado e controllare l'uniformità del solco.

To ensure that the olive has gripped the tube correctly. Unscrew the nut and make sure that the groove made by the olive is even.

Um sicherzustellen, dass der Klemmring das Rohr richtig gegriffen hat, lösen Sie die Mutter vom Körper.

Comme contrôle, dévissez l'écrou du corps et vérifiez que la bague est bien sertie sur le tube.

Para garantizar que el bicono haya incidido el tubo, aflojar la tuerca y controlar la uniformidad del apriete.

Para garantir que a bucha foi adequadamente prensada no tubo, solte a conexão e analise o rebaixo de cravamento da bucha.

7

Riserrare il dado per circa 1/4 di giro. Altra avvertenza per un buon montaggio: nel caso di tubi curvi, in prossimità del raccordo, il tubo stesso dovrà avere una distanza rettilinea almeno pari al doppio dell'altezza del dado.

Tighten the nut again with an extra quarter turn. Additional information to ensure correct assembly. Where fitting to curved tubes ensure that the section entering the fitting is straight for a minimum length of twice the nut height.

Ziehen Sie die Mutter wieder mit 1/4 Drehung an. Zusätzliche Information für eine korrekte Montage: Beim Einsatz von gebogenen Rohren in der Nähe der Verschraubung sollte das Rohr mindestens die doppelte Länge der Mutter gerade sein.

Revisser l'écrou en le tournant avec une clé sur 1 tour 1/4. Informations complémentaires pour un montage correct: Lors de l'utilisation d'un tube cintré, une longueur de tube droite égale à 2x la longueur de l'écrou et à respecter avant la connexion.

Apretar la tuerca cerca de 1/4 de giro. Otra advertencia para un buen montaje: En el caso de tubos curvados, en proximidad del racor, el tubo deberá tener una distancia rectilínea por lo menos del doble de la altura de la tuerca.

Aperte a porca novamente com 1/4 de giro adicional. Outra informação para uma boa montagem: no caso de tubos curvados, garanta que a parte do tubo que foi encaixada na conexão seja reta e tenha comprimento igual ou maior a duas vezes a altura da porca.

Pressioni e Temperature
IT

Pressioni e temperature vengono determinate dal tipo di tubo impiegato, pertanto tali valori sono da definirsi in base alle caratteristiche del tubo stesso. Riportiamo di seguito i valori delle pressioni massime consigliate per l'utilizzo dei raccordi con tubi di rame dallo spessore di 1 mm a 20° C.

I valori delle pressioni consigliate, riportate in tabella, sono stati ottenuti dai valori di prova adottando un Coefficiente di Sicurezza 4.

Sono disponibili i certificati delle prove rilasciati dai vari laboratori che le hanno eseguite.

Pressures and Temperatures
GB

The working pressures and working temperatures depend on which type of tube is used, for this reason, the values must be determined in accordance with the tube's features.

Hereunder, we specify the values of the maximum pressure advised for the fittings at a temperature of 20° C connected with copper tube, which has a thickness of 1 mm.

The values of working pressures advised, specified in table have been obtained from the test values using a Safety Factor 4.

It is available the test report made by the external laboratory test.

Druckbereich und Temperatur
DE

Drücke und Temperaturen sind definiert durch die verwendete Ausführung der Leitung, d.h. die Werte der eingesetzten Rohre sind zu beachten.

Nachfolgend geben wir die Werte des maximalen Druckes für den Einsatz der Verschraubungen mit Kupferrohren an, deren Wandstärke min. 1mm beträgt und bei einer Temperatur von 20° C.

Es muss berücksichtigt werden, dass die angegebenen Druckwerte in der Tabelle mit einem Sicherheitsfaktors von 4 berechnet wurden.

Es stehen Prüfberichte zur Verfügung, die von verschiedenen, externen Labors gemacht wurden.

Pressions et Températures
FR

Les pressions et températures de service dépendent du type de tube utilisé. Pour cette raison, les valeurs doivent être déterminées en conformité avec les caractéristiques du tube. Ci-dessous, nous indiquons les valeurs de la pression maximale recommandée pour une connexion avec un tube en cuivre de 1 mm d'épaisseur à une température de 20° C.

Les pressions de service indiquées ont été calculées avec un coefficient de sécurité de 4.

Des rapports externes de tests sont disponibles sur demande pour attester ces valeurs.

Presiones y Temperaturas
ES

Presión y temperatura vienen determinadas según el tipo de tubo empleado, por lo tanto estos valores se definen en base a las características del mismo tubo. Representamos a continuación los valores de las presiones máximas aconsejadas para la utilización de los racores con tubo de cobre espesor 1 mm a 20° C.

Los valores de las presiones aconsejadas, representadas en la tabla, han sido obtenidas de valores de prueba adoptando un coeficiente de seguridad 4.

Están disponibles los certificados de las pruebas realizadas en distintos laboratorios especializados.

Pressões e Temperaturas
PT

Pressões e temperaturas dependem do tipo de tubo aplicado, portanto tais valores devem ser definidos com base nas características do tubo em questão.

A seguir apresentamos os valores das pressões máximas aconselhadas para a utilização das conexões com tubos de cobre de espessura de 1 mm a 20° C.

Os valores das pressões aconselhadas, reportados na tabela, foram obtidas dos valores de teste adotando-se um coeficiente de segurança 4.

Os certificados de teste executados por laboratórios externos estão disponíveis.

Tubi di Collegamento

IT

Tubi in rame, ferro, acciaio, alluminio, ottone, ecc.

Con apposito rinforzo interno (art. 10770), possono essere
utilizzati anche tubi in PA11, PA6, ecc.

Connection Tubes

GB

Tubes made in copper, steel, iron, aluminium, brass, etc.

With an inside support bush (art. 10770), can be used also for
plastic material such as PA11, PA6, etc.

Geeignete Rohre

DE

Rohre in Kupfer, Eisen, Stahl, Aluminium, Messing, usw.

Mit einer internen Stützhülse (Art. 10770), können auch
Rohre aus PA11, PA6, usw. verwendet werden.

Tubes Conseillés

FR

Tubes en cuivre, acier, aluminium, laiton, etc.

Avec une fourrure intérieure (art. 10770), les tubes
plastiques PA11, PA6, etc. peuvent être utilisés.

Tubos de Conexión

ES

Tubos en cobre, hierro, acero, aluminio, latón, etc.

Con el correspondiente refuerzo interno (art. 10770), pueden
utilizarse también con tubo en PA11, PA6, etc.

Tubos de Conexão

PT

Tubos de cobre, ferro, aço, alumínio, latão, etc.

Com bucha de reforço interna (cód. 10770), podem ser
utilizados também com tubos em PA11, PA6, etc.

Filettatura

IT

Gas conica conforme ISO 7.1, BS 21, DIN 2999.
Gas cilindrica conforme ISO 228 Classe A.
Metrica conforme ISO R/262.

Threads

GB

Tapered gas in conformity with ISO 7.1, BS 21, DIN 2999.
Parallel gas in conformity with ISO 228 Class A.
Metric in conformity with ISO R/262.

Gas cónica conforme ISO 7.1, BS 21, DIN 2999.
Gas cilíndrica conforme ISO 228 Clase A.
Métrica conforme ISO R/262.

Roscas

PT

Gas cônica conforme ISO 7.1, BS 21, DIN 2999.
Gas paralela conforme ISO 228 Classe A.
Métrica conforme ISO R/262.

Pressioni e Temperature

IT

Pressioni e temperature vengono determinate dal tipo di tubo impiegato, pertanto tali valori sono da definirsi in base alle caratteristiche del tubo stesso.

Riportiamo di seguito i valori delle pressioni massime consigliate per l'utilizzo dei raccordi con tubi di rame dallo spessore di 1 mm a 20° C.

I valori delle pressioni consigliate, riportate in tabella, sono stati ottenuti dai valori di prova adottando un Coefficiente di Sicurezza 4.

Sono disponibili i certificati delle prove rilasciati dai vari laboratori che le hanno eseguite.

Pressures and Temperatures

GB

The working pressures and working temperatures depend on which type of tube is used, for this reason, the values must be determined in accordance with the tube's features.

Hereunder, we specify the values of the maximum pressure advised for the fittings at a temperature of 20° C connected with copper tube, which has a thickness of 1 mm.

The values of working pressures advised, specified in table have been obtained from the test values using a Safety Factor 4.

It is available the test report made by the external laboratory test.

Druckbereich und Temperatur

DE

Drücke und Temperaturen sind definiert durch die verwendete Ausführung der Leitung, d.h. die Werte der eingesetzten Rohre sind zu beachten.

Nachfolgend geben wir die Werte des maximalen Druckes für den Einsatz der Verschraubungen mit Kupferrohren an, deren Wandstärke min. 1mm beträgt und bei einer Temperatur von 20° C.

Es muss berücksichtigt werden, dass die angegebenen Druckwerte in der Tabelle mit einem Sicherheitsfaktors von 4 berechnet wurden.

Es stehen Prüfberichte zur Verfügung, die von verschiedenen, externen Labors gemacht wurden.

Pressions et Températures

FR

Les pressions et températures de service dépendent du type de tube utilisé. Pour cette raison, les valeurs doivent être déterminées en conformité avec les caractéristiques du tube. Ci-dessous, nous indiquons les valeurs de la pression maximale recommandée pour une connexion avec un tube en cuivre de 1 mm d'épaisseur à une température de 20° C.

Les pressions de service indiquées ont été calculées avec un coefficient de sécurité de 4.

Des rapports externes de tests sont disponibles sur demande pour attester ces valeurs.

Presiones y Temperaturas

ES

Presión y temperatura vienen determinadas según el tipo de tubo empleado, por lo tanto estos valores se definen en base a las características del mismo tubo. Representamos a continuación los valores de las presiones máximas aconsejadas para la utilización de los racores con tubo de cobre espesor 1 mm a 20° C.

Los valores de las presiones aconsejadas, representadas en la tabla, han sido obtenidas de valores de prueba adoptando un coeficiente de seguridad 4.

Están disponibles los certificados de las pruebas realizadas en distintos laboratorios especializados.

Pressões e Temperaturas

PT

Pressões e temperaturas dependem do tipo de tubo aplicado, portanto tais valores devem ser definidos com base nas características do tubo em questão.

A seguir apresentamos os valores das pressões máximas aconselhadas para a utilização das conexões com tubos de cobre de espessura de 1 mm a 20° C.

Os valores das pressões aconselhadas, reportados na tabela, foram obtidos dos valores de teste adotando-se um Coeficiente de Segurança 4.

Os certificados de teste executados por laboratórios externos estão disponíveis.

 Métrica conforme ISO R/262.

Pressioni e Temperature

Pressioni e temperature vengono determinate dal tipo di tubo impiegato, pertanto tali valori sono da definirsi in base alle caratteristiche del tubo stesso.

Riportiamo di seguito i valori delle pressioni massime consigliate per l'utilizzo dei raccordi con tubi di rame dallo spessore di 1 mm a 20° C.

I valori delle pressioni consigliate, riportate in tabella, sono stati ottenuti dai valori di prova adottando un Coefficiente di Sicurezza 4.

Sono disponibili i certificati delle prove rilasciati dai vari laboratori che le hanno eseguite.

Pressures and Temperatures

The working pressures and working temperatures depend on which type of tube is used, for this reason, the values must be determined in accordance with the tube's features.

Hereunder, we specify the values of the maximum pressure advised for the fittings at a temperature of 20° C connected with copper tube, which has a thickness of 1 mm.

The values of working pressures advised, specified in table have been obtained from the test values using a Safety Factor 4.

It is available the test report made by the external laboratory test.

Druckbereich und Temperatur

Drücke und Temperaturen sind definiert durch die verwendete Ausführung der Leitung, d.h. die Werte der eingesetzten Rohre sind zu beachten.

Nachfolgend geben wir die Werte des maximalen Druckes für den Einsatz der Verschraubungen mit Kupferrohren an, deren Wandstärke min. 1 mm beträgt und bei einer Temperatur von 20° C.

Es muss berücksichtigt werden, dass die angegebenen Druckwerte in der Tabelle mit einem Sicherheitsfaktors von 4 berechnet wurden.

Es stehen Prüfberichte zur Verfügung, die von verschiedenen, externen Labors gemacht wurden.

Pressions et Températures

type de tube utilisé. Pour cette raison, les valeurs doivent être déterminées en conformité avec les caractéristiques du tube. Ci-dessous, nous indiquons les valeurs de la pression maximale recommandée pour une connexion avec un tube en cuivre de 1 mm d'épaisseur à une température de 20° C.

Les pressions de service indiquées ont été calculées avec un coefficient de sécurité de 4.

Des rapports externes de tests sont disponibles sur demande pour attester ces valeurs.

Presiones y Temperaturas

Presión y temperatura vienen determinadas según el tipo de tubo empleado, por lo tanto estos valores se definen en base a las características del mismo tubo. Representamos a continuación los valores de las presiones máximas aconsejadas para la utilización de los racores con tubo de cobre espesor 1 mm a 20° C.

Los valores de las presiones aconsejadas, representadas en la tabla, han sido obtenidas de valores de prueba adoptando un coeficiente de seguridad 4.

Están disponibles los certificados de las pruebas realizadas en distintos laboratorios especializados.

Pressões e Temperaturas

Pressões e temperaturas dependem do tipo de tubo aplicado, portanto tais valores devem ser definidos com base nas características do tubo em questão.

A seguir apresentamos os valores das pressões máximas aconselhadas para a utilização das conexões com tubos de cobre de espessura de 1 mm a 20° C.

Os valores das pressões aconselhadas, reportados na tabela, foram obtidas dos valores de teste adotando-se um Coeficiente de Segurança 4.

Os certificados de teste executados por laboratórios externos estão disponíveis.

3 Rivestimento: NBR/ACCIAIO liscio resistente alle abrasioni, agli oli e agli agenti atmosferici.		3 Finish: NBR/STEEL smooth, abrasion, oil and weather resistant.		3 Aussenschicht: NBR/STAHL glatt, Abriebfest, Öl- und Witterungsbeständig.	

Matériaux	FR	Materiales	ES	Materiais	PT
1 Tube: NBR/ACIER lisse, résistant aux huiles.		1 Tubo interior: NBR/ACERO liso resistente a los aceites.		1 Tubo interior: NBR/AÇO suave resistente a óleos.	
2 Armature: Fibres textiles.		2 Armadura: Trenza Textil		2 Armadura: Trançado Têxtil	
3 Revêtement extérieur: NBR/ACIER lisse, résistant à l'abrasion, aux huiles et aux intempéries.		3 Tubo exterior: NBR/ACERO liso resistente a la abrasión, a los aceites y a los agentes atmosféricos.		3 Tubo exterior: NBR/AÇO suave resistência a abrasão, a óleos, a agentes atmosférico.
